Models to be Upgraded

These discs can upgrade the programme for the following models:

AVIC-800DVD, AVIC-8DVDII, AVIC-8DVD, AVIC-900DVD, AVIC-9DVDII, AVIC-9DVD

Display Compatibility

You need an A/V Receiver or Display with touch panel capability to use this software. Make sure to use a display suitable for this system. If a display that does not have a touch panel feature is connected, the software will not function properly. (The display for remote control operation can not be used.) For details, consult your dealer or refer to the product catalog.

Group 1 – A/V Receiver

The following A/V Receivers can be connected to the navigation system:

AVH-P7500DVDII, AVH-P5700DVD, AVH-P6600DVD, AVH-P6800DVD, AVHP6500DVD, and AVH-P7500DVD

The following A/V Receiver cannot be connected to the navigation system:

AVH-P5900DVD

Group 2 – Display Type AVD

The following display can be connected to the navigation system: AVD-W6210

Group 3 – AV system display

The type of the unit that has no amplifier and cannot be a control master because other unit cannot be connected to it.

The following display can be connected to the navigation system: AVX-7600

- For details of operation when connecting to the A/V Receiver or Display, refer to "Appendix" on "Operation Manual for CNDV-50MT" and the descriptions related to the navigation system on each A/V Receiver or Display's manual.

Before Upgrading the Software Programme

Possible risk when upgrading

There is a possible risk that the stored user-registered data may be lost upon completion of the update. Please be aware that the manufacturer cannot take any responsibility for lost data in the event that data is lost.

- When the update procedure is complete, the navigation system will be restarted. After the system has started up again, do NOT to turn off the power supply for the navigation system until the map of your surroundings appears.
- Any existing calculated routes will be erased. The data for "Address Book" (including "Return Home" and "Go to" data), "Areas to Avoid", and learned data of the sensor will remain. Customised settings other than above return to the default.
- If you use the remote control type, all the data will be erased and customised settings will return to the default.

Backing up Address book entries (including "Return Home" and "Go to" data)

There is the possible risk of the "Address Book" data (including "Return Home" and "Go to" data) and the "Destination History" data being lost during the update process. It is highly recommended to use a PC Card (PCMCIA TYPE II <5 V>) to back up the data.

Since the "Destination History" cannot be stored on a PC Card directly, to store the "Destination History" data, first register it as an entry of "Address Book" and then copy it onto the PC Card. (For detailed information about storing the data to PC Card, refer to the manual included in the hardware package when you purchased the navigation system or previous upgrade package.)

Renewed Points through this Upgrade

If you upgrade your navigation system by this disc, the system will have the following change;

Renewal Map database

The Map database will be changed.

Wide variety of facility information for POI search

You can search your destination from all areas. Approximately 1.5 million POIs are included in the database.

- ☐ The categories that you can use for voice recognition also will be changed. To know the categories that you can vocalize, see the displayed voice help.
- ☐ Some facilities icons used in **POI Search**, **Vicinity Search**, and **Overlay POI** will be changed.

Easy operation for expanded coverage (Country selection table)

The screen to select a country you want to search during a search step ("Country selection table") will be changed to a table format to comply with expanded coverage area. Select a country you want to search from the table.

Double Disc

This package is adopted "Double disc" system so as to contain larger database and expanded coverage area: one for the west and the other for the east.

However, the map data over 200m scale is contained both disc and there is a large overlapping area (Germany and part of Austria) so that you can get comfortable operation at the long-distance navigation.

Configuration of data stored on discs

The database and lower scale maps stored on each disc are as follows:

West area disc

East area disc

In case of the cross disc routing

Only when setting your destination for the another disc, it is necessary to replace from the current disc to another disc.

In case of the cross disc routing, the following procedure is recommended.

- 1 Insert the disc containing the destination you want to set.**
- 2 Search for the destination and set as your destination.**
- 3 After route calculation finished, remove the current disc.**
- 4 Insert the disc containing your current location.**
 - ☐ The navigation system reboot automatically with keeping your destination and route set.
- 5 Drive toward your destination.**
 - ☐ When you approach the areas not stored on the disc, the navigation system notify you of approaching that area. Replace the disc at that time.
 - ☐ Removing the disc and inserting another disc causes the navigation system to automatically restart and reload the new route. (This automatic "Reroute" operation cannot be cancelled.)

Limitation of Functions for Areas not Stored on the Disc

For areas not stored on the disc, the functions will operate as follows:

Displaying the map

- Maps with a scale of between 25 m and 200 m cannot be displayed. (If the scale was set to between 25 m and 200 m, it is automatically switched to 500 m.)
- When driving with **Mixed Mode**, **St.List Mode** or **Driver's View**, upon entering an area not stored on the disc the display automatically switches to **Map Mode**. (When the vehicle reenters an area stored on the disc, the display returns to the previous map mode except for **Driver's View**.)

Destination search

- You cannot search a destination in an area not stored on the disc using **Address Search**, **POI Search**, **Vicinity Search** or **Postal Code Search** (including operation by voice recognition).
- If you cannot search in a currently selected country, the system may forcibly switch to the country selection screen.
- A **Motorway Search** covers all areas, regardless of the disc on which the information is stored.
- If a **Vicinity Search** is performed on the border of an area not stored on the disc, the system will not necessarily select the nearest facility. (The search will take place only within the range of areas stored on the disc.)

Guidance

- When your vehicle approaches an area not stored on the disc, you will be notified three times: when the distance to the area not stored on the disc is 20 km (12 mi), 10 km (6 mi) and 5 km (3 mi) respectively. When your vehicle enters that area, a caution is given.
- In the areas not stored on the disc, only guidance for reaching the destination is provided. No other guidance is given.
- If a route calculation is operated within an areas not stored on the disc, the route might not be set from the streets you are currently driving. Also, if you set the destination in an

area not stored on the disc of the disc, the system may not be able to set the route up to the destination.

- If the vehicle deviates from the set route in an area not stored on the disc, the Auto Reroute function will not work.
- Even if "**Close-up of Junction**" is "**On**", the display will not switch to an enlarged map of the junction.
- Even if you drive on the motorway, lane information, motorway exit numbers and motorway signs will not be displayed.

Route information

- If the set route goes through an area not stored on the disc, no route profile for that area will be displayed. (If the set route traverses both an area not stored on the disc and area stored on the disc, only the route profile within the area stored on the disc will be displayed.)
- Route scrolling for an area not stored on the disc is possible only with a map scale of 500 m or above.

Other function limitations

Avoid area

- An area not stored on the disc cannot be set as an **Areas to Avoid**.
- ☐ A set **Areas to Avoid** may be deleted when the software is updated. If this happens, the system will automatically try to recover the deleted information, but data can be recovered only for areas stored on the disc. For items that could not be recovered, a recovery process will begin when you set another disc.

Messages and How to React to Them (Additional Messages)

The following messages are added to those of CNDV-50MT:
